It may serve both to defend against local infection and to prevent access of foreign antigens to the general immunologic system.

-!- MISCELLANEOUS: The final C-region domain is deleted from Ref.2 chain. It was isolated from a myeloma protein that contains 1 light and 1 heavy chain per molecule, linked by a disulfide bond. In contrast, normal mouse IgA molecules contain 2 light and 2 heavy chains and lack a light-heavy chain disulfide bond. heavy chains and lack a light-heavy chain disulfide bond.
-!- MISCELLANEOUS: M511 chain was isolated from a myeloma protein that binds phosphorylcholine.
-!- MISCELLANEOUS: M511 sequence was compared with that of mouse MOPC 47A, and a genetic mechanism for the deletion of the CH3 domain of the mutant chain is proposed.
                                                                                                                                                                                                         VARIANT

IsoId=P97797-3; Sequence=VSP_007031;

-:- TISSUE SPECIFICITY: Highly expressed in cerebral cortex, brain, spinal cord, cerebellum and spleen, and at much lower levels in kidney, thymus, heart, lung and liver. Within the cerebellum, highly expressed throughout the molecular layer, and in synaptic glomeruli in the granule cell layer. Detected in neurons of the hippocampus and dentate gyrus, and in olfactory bulb. Not detected in Purkinje cells. Highly expressed in the plexiform layers, optic fiber layer and the outer segments of the photoreceptor layer in the retina. Highly expressed in macrophages. Isoform 3 is detected at very low levels in all tissues tested.

--- DEVELOPMENTAL STAGE: Highly expressed in the CNS of embryos from day 7 to 17.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    factors or insulin. Mediates negative regulation of phagocytosis, mast cell activation and dendritic cell activation. CD47 binding prevents maturation of immature dendritic cells and inhibits cytokine production by mature dendritic cells (By similarity). SUBUNIT: Binds FTPN11 when tyrosine-phosphorylated, except in macrophages, where it primarily binds FTPN6. Binds GRB2 vitro. Binds FGR. Binds JAK2 irrespective of its phosphorylation status and forms a stable complex. Binds SCAP1 and/or SCAP2. The resulting complex recruits FYB. Binds BTX2B (By similarity). SUBCELLULAR LOCATION: Type I membrane protein.

as docking protein and induces translocation of PTPN6,

PTPN11 and other binding partners from the cytosol to the

plasma membrane. Supports adhesion of cerebellar neurons, neurite

outgrowth and glial cell attachment. May play a key role in

intracellular signaling during synaptogenesis and in synaptic

function. Involved in the negative regulation of receptor tyrosine

kinase-coupled cellular responses induced by cell adhesion, growth

factors or insulin. Mediates negative regulation of phagocytosis,

mast cell activation and dendritic cells and inhibits

cyrokine production by macure dendritic cells and inhibits

cyrokine production by macure dendritic cells and inhibits

the release of nitric oxide by macrophages (By similarity).

subunit: Binds pTPN1 when tyrosine-phosphorylated, except in

macrophages, where it primarily binds pTPN6. Binds GRB2 in vitro.

Binds FGR. Binds JAK2 irrespective of its phosphorylation status

and forms a stable complex. Binds SCAP1 and/or SCAP2. The

resulting complex recruits FYB. Binds PTK2B (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TISSUBErecal LILLY PubMed=8943344;

CP47 binding prevents maturation of immature dendritic cells and inhibits cytokine production by mature dendritic cells (By similarity).

SUBUNIT: Binds PTPNI1 when tyrosine-phosphorylated, except in macrophages, where it primarily binds PTPNS. Binds GRB2 in vitro. Binds JAKZ irrespective of its phosphorylation status and forms a stable complex. Binds SCAP1 and/or SCAP2. The resulting complex recruits FYB. Binds FGR and FTK2B (By similarity).

SUBCELLULAR IOCATION: Type I membrane protein.

TISSUE SPECIFICITY: Highly expressed in spleen macrophages. Detected in skin dendritic cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PTM: Phosphorylated on tyrosine residues (By similarity). SIMILARITY: Contains 2 immunoglobulin-like C1-type domains. SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        European Bioinformatics Institute.

"Amino acid sequences of two mouse immunoglobulin lambda chains.";

Proc. Natl. Acad. Sci. U.S.A. 68:590-594(1971).

-I- MISCELLANEOUS: The MOPC 315 cell line produces 2 light chains, 1 normal lambda-2 chain and 1 abnormal lambda-1 chain that is missing a large part of the V region. The C region sequence (shown here) appears completely normal.

-I- SIMILARITY: Contains 1 immunoglobulin-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                    Pfam; PF00047; ig; 1.

INTERACTS WITH THE BETA INTEGRIN VLA4 ON LEUKOCYTES, AND MEDIATES BOTH ADHESION AND SIGITRANSDICTION. THE VCAMI/VLA4 INTERACTION MAY PLAY A PATHOPHYSIOLOGIC ROLE BOTH IN IMMUNE RESPONSES AND IN LEUKOCYTE ENIGRATION TO SITES OF INFLAMMATION. SUBCELLULAR LOCATION: Type I membrane protein. TISSUE SPECIFICITY: Expressed on inflamed vascular endothelium, well as on macrophage-like and dendritic cell types in both norm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (Rel. 25, Last sequence update)

TISSUE SPECIFICITY: Found in the basement membranes.
PTM: CONTAINS THREE HEPARAN SULFATE CHAINS AS WELL A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: This protein is an integral component of basement membranes. It is responsible for the fixed negative electrostatic charge and is involved in the charge-selective ultrafiltration
                                                                                                                                                                                                                                                                                                                                                                                                         properties. It serves as an attachment substrate for cells. SUBUNIT: Purified perlecan has a strong tendency to aggregate in dimers or stellate structures. It interacts with other basement membrane components such as laminin, prolargin and collagen type
                                                                                                                                                                                                                                                                                                                                                                                             I۷.
